– It's impossible to know everything. It's enough to understand

## SUMMARY

I have over 10 years of experience in information technology. Worked in different size teams using agile development processes and have also completed projects by myself.

Mainstream - development using CodeIgniter framework, building application and database architecture, optimizing and code refactoring, optimizing DB performance. Can perform most of full stack tasks.

I'm not afraid to learn new things. Also want to get new experience with Laravel in real project because better study is a practical application.

Basic principles: honesty and decency.
